5) New 70s programs

RAH 70.72 Chronic inflammation

For supportive use in the following conditions:

Chronic inflammation is a long-lasting inflammatory response that can persist for months or years and cause damage to the body.

It is caused by autoimmune diseases, chronic infections, unhealthy lifestyles, or environmental factors.

The program does not contain any pathogens.

70.73 Immunomodulation II

For supportive use in the following conditions:

Immunomodulation is used to energetically regulate the immune system - either to strengthen it when it is too weak (e. g. in cases of infection or cell degeneration) or to dampen it when it is overactive (e. g. in cases of autoimmune diseases or allergies).

The program does not contain any pathogens.

6) The test option for causal analysis in the RAH Human has been updated.
